

APS5000 WiFi Software Instruction

APS 5000 Bluetooth WiFi Software Installation and
Use Instruction

Unzip Software Package Pace EX_1.0.52

Unzip software package PaceEX_1.0.52, then Import the apk program in the package to your Android phone. For IOS phones, please search and download the PACEEX BMS software in the Apple Store. (Some Android phones may have a protector that changes the file suffix. You can use the Android phone or third-party file management software to modify the file suffix, make sure that the suffix is '.apk')

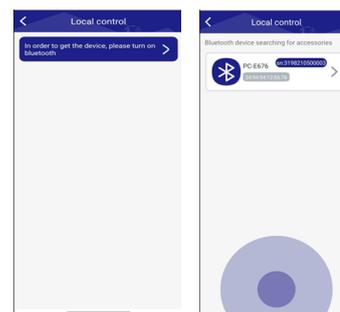

Connection

The mobile phone software opens the interface. The LOCAL CONTROL is the local Bluetooth connection, and the remote control is the WIFI connection. Select Bluetooth connection first.

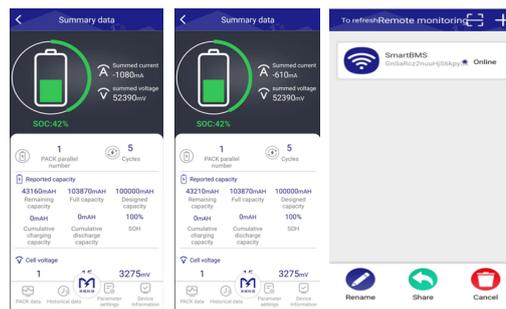

Check the Battery Switch

Check that the battery SW switch is ON. Turn on the Bluetooth switch of the phone. Select and click the battery pack with the corresponding SN code.

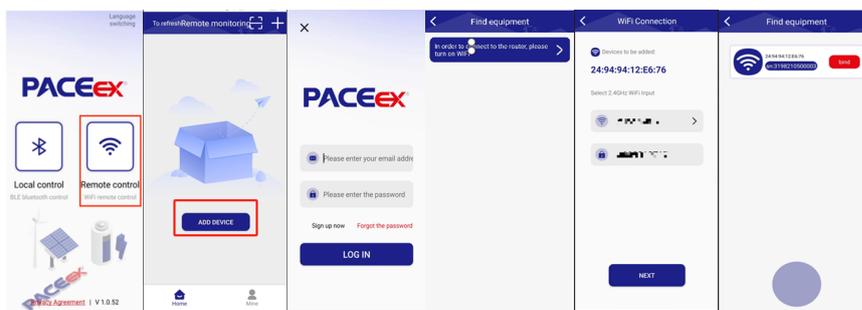

Battery information

Advise to use the local wifi network to connect the battery pack. Press and hold the battery pop-up option to rename, share, or delete the battery.

Wifi Connection

Return to select wifi connection, you need to register an account using email. Turn on your phone's wifi and connect to wifi. Select and click the battery pack with the corresponding SN code. After the battery is bound to wifi, Bluetooth may not be connected, and other mobile phone accounts cannot be bound to the battery.

Account Setting

After registering and logging in to your account, click Add Device.
